

Technical Data Sheet

UNICRETE SB

Synthetic latex additive for cement mixes

Description :

UNICRETE SB is a bonding additive for concrete and mortars. It increases the adhesion, flexibility, water repellency and resistance of thin layer cement plasters and floor screeds. It can be added to mortars for laying tiles, for adhesive slurries for bonding old to new concrete and for filling holes and cracks in concrete.

Precautions :

Do not use UNICRETE SB as a sole bonding slurry without the addition of cement.

Instructions for use :

Substrates should be solid, not subject to shrinkage, free from dust and loose materials, and free from oil, grease, wax and paint.

In case of hot weather, substrates should be dampened with water to improve the cement hydration and adhesion.

Stir UNICRETE SB and pour it into a clean container. Add the required amount of water, cement and other fillers and mix until a homogeneous paste is obtained.

Technical data:

- **Color** : White
- **Dosage** :

Adhesive slurry for new to old concrete :
1 p.b.w Unicrete SB : 1 p.b.w Water : 2 p.b.w cement

Plasters, renders and screeds from 1 to 3cm:
2-4% of total weight of cement, sand, aggregate mix

- **Packing** : 20 Kgs gallons
- **Storage** : At least 12 months in a dry place in the sealed original packing.
